

Morphix Technologies

Job Description for Quality Manager

Position Title: Quality Manager

Principal Overview: Morphix Technologies has an excellent opportunity for an experienced Quality Manager to support our operations in Virginia Beach. This person should have solid technical skills and be at home in a hands-on environment in a small growing company.

Responsibilities and Output:

- Hands-on management of QA, QC, process control, and training functions needed to produce, inspect and test products at various stages in the product fulfillment process
 - Oversee, maintain, improve and represent the company's ISO 9001:2000 program
 - Oversee and maintain the corrective/preventive actions program and support product development activities through DOE and other decision-making techniques
 - Lead the design and implementation of comprehensive process control and quality assurance programs
 - Advise top management on strategic quality initiatives
-

Background Experience, Skills and Education Required:

- BS degree in Science or Engineering, chemistry background preferred
 - 4+ years of experience in a quality or manufacturing management role
 - ASQ (American Society for Quality) certification preferred
 - Experience with ISO 9000 preferred
 - Strong analytical skills, high level of initiative and the ability to communicate to all levels of the company and external suppliers and customers
 - Proficiency in data collection, analysis and presentation with working knowledge of statistical DOE
 - Strong knowledge of good laboratory practices
 - Experience with coating techniques of inks/dyes, plastic assembly processes and color matching techniques preferred
 - Experience using laboratory equipment (mass spectrometry, X-rite, digital mass flow controllers) preferred
 - Excellent computer skills and proficiency with MS Word, Excel, Access and Internet
-

Morphix Technologies is an equal opportunity employer.
